This proposal captures the surrounding site elements and landscape of Frank Lloyd Wright’s Fallingwater and Bohlin Cywinski Jackson’s Barn at Fallingwater. The program elements of the structure interweave within the topography and nature of the site. We created a strong axial procession from the barn by extending existing lines of the site through our structure and incorporating them into the circulation. When walking to and from different program spaces, the visitor is immersed into the surrounding landscape. Connecting pathways pull the visitor through three season spaces that frame views cascading towards Fallingwater.
